Top Five Feline Toxins

Pet Poison Helpline's Top Five Toxins Dangerous to Cats

How to keep your cat safe this upcoming year

By Ahna Brutlag, DVM, MS and Justine Lee, DVM, DACVECC

It is no surprise that dogs and cats are, by far, the most common pets in U.S. households today. The cat population in the U.S. outnumbers dogs by more than 10 million, making them the most populous pet species. This is due, in large part, to apartment dwellers in urban environments, the ease of cat maintenance, and the potentially lower financial cost of ownership.

Dogs tend to be prone to mischief and account for a large percentage of calls to Pet Poison Helpline, a 24/7 animal poison control based out of Minneapolis. That said, cats still comprise a significant number of calls to Pet Poison Helpline. The top five most common cat toxins include:

- 1) Human or veterinary drugs
- 2) Poisonous plants
- 3) Insecticides
- 4) Household cleaners
- 5) Other poisons, such as glow sticks and liquid potpourri

Human and Veterinary Medications:

Approximately 40% of calls to Pet Poison Helpline are due to cats inappropriately ingesting human or veterinary drugs. Cats have difficulty metabolizing certain drugs due to their altered liver metabolism, especially as compared to dogs and humans.

Common drugs such as non-steroidal anti-inflammatories (NSAIDs) are some of the most deadly to cats. When ingested, NSAIDs can result in severe, acute kidney failure and gastrointestinal injury/ulcers. Likewise, one Tylenol (e.g., acetaminophen) tablet can be fatal to a cat.

Untreated, it can cause severe anemia (low red blood cell count), difficulty breathing, a swollen face, liver failure and death. Cats also seem to like the taste of certain antidepressants (e.g., Effexor), which may contain an attractive smell or flavor in the coating. With any accidental medication ingestion, immediate veterinary care is imperative.

Plants: Poisonous plants are the second most common toxin that cats get into, and represent approximately 14% of feline-related calls to Pet Poison Helpline. True lilies (*Lilium* and *Emerocallis* spp.), including the Tiger, Day, Asiatic, Easter, Oriental, and Japanese Show lilies, are among the most deadly, as ingestion can cause severe, acute kidney failure in cats. Because these flowers are fragrant, inexpensive and long-lasting, florists often include them in bouquets. Small ingestions of two or

three petals or leaves (even the pollen) can result in severe, potentially irreversible kidney failure. Even the water in the vase can be potentially poisonous to cats. Immediate veterinary care is imperative.

Despite their name, other plants such as the Peace and Calla lily are not true lilies and do *not* cause kidney failure. Instead, these plants contain insoluble oxalate crystals that can cause minor symptoms, such as irritation in the mouth, tongue, pharynx and esophagus.

Insecticides: Insecticides comprise approximately 9% of feline-related poisonings at Pet Poison Helpline. Exposure to household insecticides can occur when a cat walks through an area that was treated with lawn and garden products, sprays, powders, or granules. Cats are also typically accidentally exposed to household insecticides when pet owners inappropriately apply a canine topical flea and tick medication onto a cat. Dog-specific insecticides containing pyrethrins or pyrethroids are highly toxic to cats. Severe drooling, tremors and life-threatening seizures can occur. Always read labels carefully before using any kind

of insecticide and ask your veterinarian about appropriate topical flea and tick medications for your cat. Even more "natural" or "holistic" flea medication can be very dangerous to cats.

Household Cleaners: Exposure to household cleaners accounted for approximately 6% of feline-related calls to Pet Poison Helpline. Many cat owners don't realize that some common household cleaners like kitchen and bath surface cleaners, carpet cleaners, toilet bowl cleaners and even laundry detergents can be toxic to cats. Symptoms can include profuse drooling, difficulty breathing, vomiting, and even organ damage. After cleaning your home, make sure all excess liquid or residue is wiped up or eliminated as soon as possible. Only allow your cat back into the cleaned areas after the products have completely dried. When storing cleaning products, always keep them out of your cat's reach.

Other Poisons: The remainder of feline-related calls to Pet Poison Helpline involve less obvious poisons, such as glow sticks. Glow sticks and jewelry contain a very bitter tasting liquid called dibutyl phthalate. While rarely deadly, just one bite into glow sticks can cause your cat to drool profusely. Most of these exposures can be managed at home. Offer (but do not force) your cat to drink some chicken broth or canned tuna (in water, not oil); this will help remove the bitter taste from the mouth. Remove the glow sticks and clean up any remaining liquid to prevent re-exposure as cats may continue to groom the bitter dibutyl phthalate off their fur. A bath may be in order to remove any "glowing"

liquid from his or her fur. If you see signs of redness to the eyes, squinting, continued drooling, or not eating, a trip to the veterinarian may be necessary.

Keep your four-legged felines safe by protecting them from these common feline toxins. If you think your pet may have ingested something harmful, take action immediately. Contact your veterinarian or Pet Poison Helpline at **1-800-213-6680**.

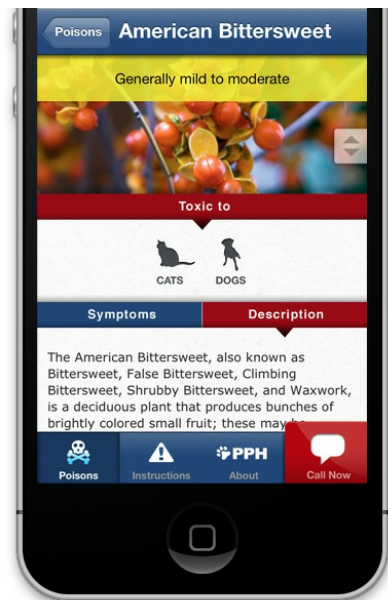

Check out our new iPhone app [Pet Poison Help!](#)

Download Pet Poison Help for information on hundreds of household products and plants that are potentially toxic to your pet, and steps to take if your dog or cat is exposed to one of these toxins.

We created [Pet Poison Help](#) to assist pet owners or veterinarians in quickly identifying potential poisons, recognizing symptoms of a potential poisoning, and to allow one-touch direct dialing access to the veterinary professionals at Pet Poison Helpline. For only \$0.99, Pet Poison Help will provide you with:

- Life-saving access to poison information with one-touch direct dialing to Pet Poison Helpline.
- A searchable database of over 250 poisonous plants, foods, medications and household items, including pictures.
- Descriptions of how specific poisons affect your pet, their alternate common names, and symptoms to watch for.
- Instructions on what to do if your dog or cat is exposed to a dangerous substance.
- Constant access to poison information, even when you don't have Internet access
